

Ovidiu project, one step forward

EnPower Energy professionals with the support of MPRIPartners recently completed a new stage of the project in the vicinity of the town of Ovidiu, Constanta county. Thus, for an area of 100 hectares, the construction permit for what is to be a new photovoltaic park with a capacity of 60MW has been obtained.

The project was developed by EnPower Energy, a leading project company in the green energy sector. It was thereafter sold to Econergy International Ltd, part of Israel-based Econergy Renewable Energy Ltd, towards the end of last year.

As was the case during the sale of the project, **MPRIPartners** has been working with EnPower Energy to coordinate the procedure for obtaining the construction permit. The assistance will continue until the end of the project, i.e. until the commissioning of the new PV park. Currently the ongoing assistance concerns the procedure for obtaining the construction permit for the park's station.

The team dedicated to this stage of obtaining the construction permit was further coordinated by **Gelu Maravela** and **Dana Radulescu** and is composed of lawyers **Carmen Banica, Sonia Benga** and **Alexandra Mihailov**.
